

Education

California State University, Long Beach Master of Science in Computer Science Key Courses: Artificial Intelligence, Machine Learning, Distributed Computing, Natural Language Processing	May 2027 Long Beach, CA, USA
Gujarat Technological University Bachelor of Science in Computer Science Key Courses: Object Oriented Programming, Data Structures, Relational Database, Computer Networks, System Design	June 2024 Ahmedabad, India

Technical Skills

Programming Languages: Python, Java, JavaScript, TypeScript, C++, C#, Golang, Rust
Backend & Databases: Node.js, Express.js, SQL (MySQL, PostgreSQL), NoSQL (MongoDB, DynamoDB)
AI/ML: PyTorch, TensorFlow, Scikit-learn, XGBoost, R, LangChain, NLP, Computer vision, NumPy, Pandas, Tableau, SAS
Cloud/DevOps & Web: AWS, GCP, Azure, CI/CD, Git, Linux/Unix, React, Angular, Vue, Bootstrap, Web3, HTML5/CSS
Software Engineering Fundamentals: Algorithms, Debugging, Scalable Systems, SDLC, Multi-threaded Programming, Agile

Experience

Technolee Software Engineer (Data & ML)	July 2024 - July 2025 Ahmedabad, India
- Engineered and deployed an end-to-end REST API that delivered ML predictions < 200ms, enabling real-time dashboards for 20+ product lines for cross-functional teams, eliminating 10+ hours of manual reporting each week. - Built and deployed a logistic regression model on 30K+ sales records, applying machine learning and statistical modeling techniques to improve demand forecasting accuracy by 25% across 20+ product categories. - Automated PostgreSQL + NLP ETL pipeline with custom scheduling, deployed on AWS, processing 50K+ daily records and enabling analysts to work with daily refreshed insights instead of weekly updates.	
Indian Space Research Organization (ISRO) AI/ML Engineer Intern	January 2024 - July 2024 Ahmedabad, India
Built enterprise satellite data pipeline with automated validation protocols, achieving 99.9% data integrity, while processing 1+ GB of datasets daily for solar insolation forecasting in renewable energy applications. - Optimized LSTM-based forecasting models using PyTorch/CUDA and MATLAB, leveraging advanced statistical techniques to reduce prediction error by 25% and improve model efficiency by 20%. - Developed data visualization dashboards using Matplotlib and Seaborn, transforming complex satellite data into actionable insights and reducing reporting cycles by 40%.	
Cre-Art Solutions Software Engineer Intern	June 2023 -August 2023 Ahmedabad, India
Redesigned Django REST APIs with advanced OOP patterns, achieving 20% performance boost while processing 50K+ daily financial transactions for trading platform. Built automated validation framework with real-time error detection, reducing accounting discrepancies by 18% and ensuring financial compliance standards across ₹50+ lakh monthly transactions. - Built interactive data visualization dashboards in Power BI with secure SQL integration, enabling real-time financial analysis and reducing monthly reporting time by 30%.	

Personal Projects

AI-Powered Professor Rating Platform Try me! LangChain, FastAPI, Redis, WebSockets, JavaScript	August 2025
- Built an AI-powered professor search platform using LangChain + Pinecone (RAG) on RateMyProfessor data, enabling students to discover and evaluate professors with significantly improved relevance over traditional keyword search. - Designed a FastAPI WebSocket backend with Redis caching that streams token-by-token responses in real time, with an agentic RAG-to-GraphQL fallback pipeline ensuring consistent answer coverage across queries. - Developed a responsive web interface with HTML/CSS featuring AI-driven professor recommendations, follow-up context handling, and side-by-side professor comparisons for an interactive search experience.	
PageSpeaks — Multi-Voice TTS Platform Try me! Python, PyTorch, F5-TTS, Whisper, Modal, FastAPI, Next.js	May 2026
- Fine-tuned F5-TTS (flow-matching voice synthesis) on 19 hours of lecture audio, producing 6,676 training clips and deploying on serverless Modal GPU with HuggingFace Hub model storage. - Built an end-to-end audio preprocessing pipeline in Python — silence-splitting, noise reduction, and Whisper-based transcription — converting raw MP3 lectures into a clean LJSpeech-format training dataset. - Implemented chunked streaming inference on serverless GPU, prefetching the next audio segment while the current one plays to minimize perceived latency across long-form text.	

Certification

AWS Certified Solutions Architect – Associate (Credential ID: link)	Expires March 2029
